EDUCATION

University of Washington

Minors in Business, Data Science, Applied Mathematics

Sep 2023 – Jun 2027

Seattle, WA

EXPERIENCE

Artificial Intelligence Engineering Intern

SeaWolf AI

Jun 2025 – Sep 2025

Seattle, WA

- Developed Python AI input routing filter for 100+ users, reducing clarification cycles by 65%.
- Built telemetry and logging APIs to monitor latency, failures, and anomalous system behavior, improving response performance by 30%.
- Conducted edge-case testing under simulated traffic to identify system vulnerabilities and reduce failure rates by 15%.
- Evaluated AI model outputs and AI-generated code (Claude, Roo) for bias, unsafe behaviors, and failure modes.

FIN205 Teaching Assistant (Personal Finance Literacy)

University of Washington

Apr 2025 – Present

Seattle, WA

- Grade assignments, case studies, and exams for 100+ students with rubric consistency.
- Lead office hours and communicate with faculty to support student learning and course operations.

Director of Student Engagement

Women in Informatics

Mar 2025 – Present

Seattle, WA

- Lead quarterly events for 1,000+ student body, increasing engagement.
- Partner with Deloitte, Adobe, and Microsoft to host networking events (50–100+ attendees) and raise \$1,500+ in funds.

PROJECTS

BookSharer Web App | *HTML/CSS, Node.js, Express, MongoDB, Azure*

Nov 2025 – Dec 2025

- Engineered full-stack web app with REST APIs for book search, reviews, and user management.
- Implemented session-based authentication, RBAC-protected routes, and input validation middleware to secure APIs.
- Indexed and optimized MongoDB queries, improving average data retrieval latency by 25%.
- Deployed application to Azure with CI/CD automation, improving deployment reliability.

IRL Bingo | *Swift, SwiftUI, Firebase, MVVM*

Apr 2025 – Jun 2025

- Built real-time iOS multiplayer app using SwiftUI with Firebase backend synchronization.
- Implemented event-driven state management and Firebase listeners to maintain consistent live board updates across users.
- Designed scalable Firebase data models with role-based access control to maintain secure state across concurrent sessions.

Habit Tracking Web App | *React, Node.js, Firebase, REST APIs, Git*

Mar 2024 – Jun 2024

- Built full-stack habit tracking app using React frontend and Node.js REST APIs.
- Implemented Firebase authentication, input validation, and secure backend APIs for user data persistence.

SKILLS

Programming: Python, Java, Swift, JavaScript, SQL

Security & Systems: CLI, OWASP, Input Validation, Role-Based Access Control (RBAC), Secure API Design

Tools & Platforms: Node.js (Express), React, Firebase, Azure, Git, CI/CD, Performance Testing
